What would you like us to know about you?

1. My belief in enhancement of technical capacity of Engineers is strong. One of the surest ways to enhance local content is to ensure we have competent professionals through training and capacity building. We should also ensure the 40% local content law is adequately implemented in all the Government Projects irrespective of the financier.
2. Accountability: As a treasurer for IEK accountability and responsible leadership are some of the key ingredients. I have a track record of accountability and responsible leadership through my work experience as a Resident Engineer for various projects across the country
 - Private sector - a highway Engineer with a local consultancy for 6 years
 - Worked as a Project Engineer for Bamburi and Lafarge group
 - Public Sector: Currently an Assistant Director at KURA.
